

Software Requirement Specification (SRS)

Project Name: Enomy-Finances Management System (EFMS)

Prepared by: Junior Software Developer, XYZ PVT LTD

Date: October 01, 2025

Version Control: Managed via GitHub Repository

1. Introduction

1.1 Purpose:

This document defines the requirements for the Enomy-Finances Management System (EFMS). The system will support both staff and clients by providing secure, efficient, and user-friendly tools for managing mortgages, savings, and investment services.

1.2 Scope:

- Clients: Register, log in, manage personal financial accounts, apply for services (mortgages, savings, investments), and track progress.
- Staff: Manage client accounts, process applications, generate reports, and provide advice efficiently.
- Administration: Oversee operations, manage staff accounts, and ensure regulatory compliance.

The system will be a web-based application with future mobile app support. GitHub will be used for version control, collaboration, issue tracking, and continuous integration.

1.3 Definitions:

- EFMS – Enomy-Finances Management System
- UI – User Interface
- DBMS – Database Management System
- GitHub – Online version control and project collaboration platform

2. Overall Description

2.1 Product Perspective:

The system will be a centralized client-server application. Clients interact via a web portal, staff use a management dashboard, and administrators oversee through an admin console.

2.2 Product Functions:

- Client registration & authentication
- Service application (mortgage, savings, investment)
- Staff dashboard for managing client requests
- Reporting and analytics
- Secure payment and transaction history
- Role-based access control

2.3 User Characteristics:

- Clients: Basic IT skills, need an intuitive interface.
- Staff: Moderate IT skills, require quick access to client data.
- Administrators: Advanced users managing security and compliance.

2.4 Constraints:

- Must comply with financial data security regulations (e.g., GDPR).
- Must be accessible via modern web browsers.
- GitHub must be used for version control.

3. Specific Requirements

3.1 Functional Requirements:

1. User authentication system (login/registration).
2. Role-based access for clients, staff, and admins.
3. Application submission for financial services.
4. Data encryption for secure storage and transfer.
5. Reporting system (monthly, quarterly, yearly).
6. Notifications via email/SMS.

3.2 Non-Functional Requirements:

- Performance: System should handle 500+ concurrent users.
- Security: Data encrypted (SSL/TLS, AES).
- Usability: Simple UI for clients.
- Scalability: Should support future mobile app integration.
- Maintainability: Source code managed in GitHub with versioning.

4. Version Control & GitHub Usage

- Repository: GitHub private repo managed by XYZ PVT LTD
- Branching strategy: main (production), dev (development), feature branches for modules.
- Pull requests reviewed before merging.
- GitHub Issues for task management.
- GitHub Actions for continuous integration and automated testing.

5. Appendices

- Mockup screenshots (if available).
- Glossary of financial terms.
- References to financial compliance standards.
